BP's Oil Drilling Disaster

- Major **fishing, shrimp, and oyster industry closures.**
- **Blue fin tuna spawning areas** and **endangered sperm whale populations** located near spill site.
- Coastal communities and the nation brace for coastal impacts as oil begins to come ashore.

Our Response

- **Independently monitor** with flyovers, boat excursions, and independent research to prove or counter claims by BP and federal officials that everything possible is being done to clean up this spill.
- Call on BP to **make impacted Gulf coast communities whole again,** and **ensure BP pays for clean up.**
- Advocate to **require a Plan B to respond to accidents in the future** and better regulatory oversight to prevent drilling accidents.
- Work to maintain off-shore drilling moratorium in eastern Gulf and draw attention to **oil and gas industry role in Louisiana's coastal wetlands loss crisis.**
