

ASCEND NYLON PLANT

Florida's Largest Source of Industrial Discharges Requests a Hearing

The Ascend Nylon Plant in Cantonment, Florida discharges around 20 million pounds of Toxics Release Inventory (TRI) chemicals annually, far more than any other facility in the state.

The discharge is injected underground through a system of wells that must pass through the region's drinking water supply, and has been occurring daily for the last 60 years.

The permit allowing this discharge is up for renewal by the FL Department of Environmental Protection (FDEP), and a public hearing has been set for Oct. 12.

Ascend Public Meeting - Oct. 12

4:30 p.m. to 6:30 p.m.

Tryon Library Meeting Room,
1200 Langley Avenue, Pensacola,
Florida, 32504.

Public comments on the permit renewal may be provided at the meeting or by email to:
APP@FloridaDEP.gov.
Deadline to submit comments is October 17th.

Toxics Release Inventory chemicals at Ascend

The Public Needs to Know:

- What is in the discharge and how toxic is it?
- Where does it go?
- Is our drinking water supply safe from this discharge?
- Will the discharge end up in our bays and bayous?
- Why is Ascend allowed to discharge these materials underground rather than dispose of them in a way that keeps them out of our water and air?
